MOUNTING

The capacitors are designed for automatic placement on to printed-circuit boards.

Optimum dimensions of soldering pads depend amongst others on soldering method, mounting accuracy, print layout and / or adjacent components.

For recommended soldering pad dimensions, refer to Fig. 3 and Table 3.

SOLDERING

Soldering conditions are defined by the curve, temperature versus time, where the temperature is that measured on the component during processing.

For maximum conditions refer to Fig. 4.

Any temperature versus time curve which does not exceed the specified maximum curves may be applied.

As a general principle, temperature and duration shall be the **minimum** necessary required to ensure good soldering connections. However, the specified maximum curves should never be exceeded.

Note

⁽¹⁾ Identical with endurance for this series

Endurance can be calculated by formula below:

 $L = L_{Tmax.} \times 10^{\frac{T_{max.} - T_a}{20}}$

L: estimated lifetime (h)

L_{Tmax}: base lifetime specified at maximum operating temperature with applied DC voltage (h)

T_{max}: rated maximum operating temperature (°C)

T_a: actual ambient temperature (°C)

Statements about product lifetime are based on calculations and internal testing. They should only be interpreted as estimations. Also due to external factors, the lifetime in the field application may deviate from the calculated lifetime. In general, nothing stated herein shall be construed as a guarantee of durability.
