

## Serial Infrared Transceiver (SIR), 115.2 kbit/s, 2.4 V to 5.5 V Operation

20208

**RoHS**  
COMPLIANT

### ADDITIONAL RESOURCES

[3D Models](#)

### DESCRIPTION

The TFBS4711 is a low profile, infrared data transceiver module. It supports IrDA® data rates up to 115.2 kbit/s (SIR). The transceiver module consists of a PIN photodiode, an infrared emitter (IRED), and a low-power CMOS control IC to provide a total front-end solution in a single package.

The device is designed for the low power IrDA standard with an extended range on-axis up to 1 m. The RXD output pulse width is independent of the optical input pulse width and stays always at a fixed pulse width thus making the device optimum for standard endecds. TFBS4711 has a tri-state output and is floating in shut-down mode with a weak pull-up. The shut down (SD) feature cuts current consumption to typically 10 nA.

### FEATURES

- Compliant with the latest IrDA physical layer low power specification (9.6 kbit/s to 115.2 kbit/s)
- Small package (H x L x W in mm): 1.9 x 6 x 3
- Typical link distance on-axis up to 1 m
- Battery and power management features:
  - > Idle current -70  $\mu$ A typical
  - > Shutdown current -10 nA typical
  - > Operates from 2.4 V to 5.5 V within specification over full temperature range from -30 °C to +85 °C
- Remote control - transmit distance up to 8 m
- Tri-state receiver output, floating in shutdown with a weak pull-up
- Constant RXD output pulse width (2.2  $\mu$ s typical)
- Meets IrFM fast connection requirements
- Split power supply, an independent, unregulated supply for IRED anode and a well regulated supply for  $V_{CC}$
- Directly interfaces with various super I/O and encoder / decoder devices
- Qualified for lead (Pb)-free and Sn/Pb processing (MSL4)
- Material categorization: for definitions of compliance please see [www.vishay.com/doc?99912](http://www.vishay.com/doc?99912)

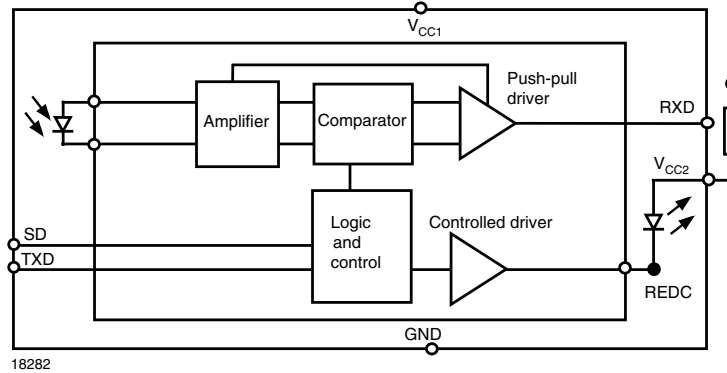

### APPLICATIONS

- Ideal for battery operated devices
- PDAs
- Mobile phones
- Electronic wallet (IrFM)
- Notebook computers
- Digital still and video cameras
- Printers, fax machines, photocopiers, screen projectors
- Data loggers
- External infrared adapters (dongles)
- Diagnostics systems
- Medical and industrial data collection devices
- Kiosks, POS, point and pay devices
- GPS
- Access control
- Field programming devices

PARTS TABLE		
PART NUMBER	DESCRIPTION	QTY/REEL
TFBS4711-TR1	Oriented in carrier tape for side view surface mounting	1000 pcs
TFBS4711-TR3	Oriented in carrier tape for side view surface mounting	2500 pcs
TFBS4711-TT1	Oriented in carrier tape for top view surface mounting	1000 pcs

**PRODUCT SUMMARY**

PART NUMBER	DATA RATE (kbit/s)	DIMENSIONS H x L x W (mm)	LINK DISTANCE (m)	OPERATING VOLTAGE (V)	IDLE SUPPLY CURRENT (mA)
TFBS4711	115.2	1.9 x 6 x 3	0 to ≥ 0.7	2.4 to 5.5	0.07

 weight 50 mg

**Definitions:**

In the Vishay transceiver datasheets the following nomenclature is used for defining the IrDA operating modes:

SIR: 2.4 kbit/s to 115.2 kbit/s, equivalent to the basic serial infrared standard with the physical layer version IrPhy 1.0

MIR: 576 kbit/s to 1152 kbit/s

FIR: 4 Mbit/s

VFIR: 16 Mbit/s

MIR and FIR were implemented with IrPhy 1.1, followed by IrPhy 1.2, adding the SIR low power standard.

**PIN DESCRIPTION**

PIN NUMBER	SYMBOL	DESCRIPTION	I/O	ACTIVE
1	V <sub>CC2</sub> IRED anode	Connect IRED anode directly to the power supply (V <sub>CC2</sub> ). IRED current can be decreased by adding a resistor in series between the power supply and IRED anode. A separate unregulated power supply can be used at this pin		
2	TXD	This Schmitt-Trigger input is used to transmit serial data when SD is low. An on-chip protection circuit disables the LED driver if the TXD pin is asserted for longer than 100 μs. The input threshold voltage adapts to and follows the logic voltage swing defined by the applied supply voltage	I	High
3	RXD	Received data output, push-pull CMOS driver output capable of driving standard CMOS or TTL loads. During transmission the RXD output is active and mirrors the transmit signal. No external pull-up or pull-down resistor is required. Floating with a weak pull-up of 500 kΩ (typ.) in shutdown mode. The voltage swing is defined by the applied supply voltage	O	Low
4	SD	Shutdown. The input threshold voltage adapts to and follows the logic voltage swing defined by the applied supply voltage	I	High
5	V <sub>CC1</sub>	Supply voltage		
6	GND	Ground		

ABSOLUTE MAXIMUM RATINGS						
PARAMETER	TEST CONDITIONS	SYMBOL	MIN.	TYP.	MAX.	UNIT
Supply voltage range, transceiver	$-0.3\text{ V} < V_{CC2} < 6\text{ V}$	$V_{CC1}$	-0.5	-	+6	V
Supply voltage range, transmitter	$-0.5\text{ V} < V_{CC1} < 6\text{ V}$	$V_{CC2}$	-0.5	-	+6	V
RXD output voltage	$-0.5\text{ V} < V_{CC1} < 6\text{ V}$	$V_{RXD}$	-0.5	-	$V_{CC1} + 0.5$	V
Voltage at all inputs	Note: $V_{in} \geq V_{CC1}$ is allowed	$V_{in}$	-0.5	-	+6	V
Input current	For all pins except IRED anode pin	$I_{CC}$	-	-	10	mA
Output sink current			-	-	25	mA
Power dissipation		$P_D$	-	-	250	mW
Junction temperature		$T_j$	-	-	125	°C
Ambient temperature range (operating)		$T_{amb}$	-30	-	+85	°C
Storage temperature range		$T_{stg}$	-40	-	+100	°C
Soldering temperature	See recommended solder profile		-	-	260	°C
Average output current, pin 1		$I_{IRED (DC)}$	-	-	85	mA
Repetitive pulsed output current pin 1 to pin 2	$t < 90\ \mu\text{s}$ , $t_{on} < 20\%$	$I_{IRED (RP)}$	-	-	430	mA
ESD protection		$V_{ESD}$	1	-	-	kV
Latchup			$ \pm 100 $	-	-	mA
Thermal resistance junction-to-ambient	JESD51	$R_{thJA}$	-	300	-	K/W

**Note**

- Reference point ground, pin 6 unless otherwise noted.  
Typical values are for design aid only, not guaranteed nor subject to production testing.  
We apologize to use sometimes in our documentation the abbreviation LED and the word light emitting diode instead of infrared emitting diode (IRED) for IR-emitters. That is by definition wrong; we are here following just a bad trend

EYE SAFETY INFORMATION	
STANDARD	CLASSIFICATION
IEC/EN 60825-1 (2007-03), DIN EN 60825-1 (2008-05) "SAFETY OF LASER PRODUCTS - Part 1: equipment classification and requirements", simplified method	Class 1
IEC 62471 (2006), CIE S009 (2002) "Photobiological Safety of Lamps and Lamp Systems"	Exempt
DIRECTIVE 2006/25/EC OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 5 <sup>th</sup> April 2006 on the minimum health and safety requirements regarding the exposure of workers to risks arising from physical agents (artificial optical radiation) (19 <sup>th</sup> individual directive within the meaning of article 16(1) of directive 89/391/EEC)	Exempt

**Note**

- Vishay transceivers operating inside the absolute maximum ratings are classified as eye safe according the above table

<b>ELECTRICAL CHARACTERISTICS</b> ( $T_{amb} = 25\text{ }^{\circ}\text{C}$ , $V_{CC1} = V_{CC2} = 2.4\text{ V to }5.5\text{ V}$ unless otherwise noted)						
PARAMETER	TEST CONDITIONS	SYMBOL	MIN.	TYP.	MAX.	UNIT
<b>TRANSCEIVER</b>						
Supply voltage		$V_{CC1}$	2.4	-	5.5	V
Operating temperature range		$T_A$	-30	-	+85	$^{\circ}\text{C}$
Data rates			9.6	-	115.2	kbit/s
Idle supply current at $V_{CC1}$ (receive mode, no signal)	SD = low, $T_{amb} = -25\text{ }^{\circ}\text{C to }+85\text{ }^{\circ}\text{C}$ independent of ambient light, $V_{CC1} = V_{CC2} = 2.4\text{ V to }5.5\text{ V}$	$I_{CC1}$	40	70	150	$\mu\text{A}$
	SD = low, $T_{amb} = 25\text{ }^{\circ}\text{C}$ , $V_{CC1} = V_{CC2} = 2.4\text{ V to }5.5\text{ V}$	$I_{CC1}$	40	70	100	$\mu\text{A}$
Average dynamic supply current, transmitting	$I_{RED} = 300\text{ mA}$ , 20 % duty cycle	$I_{CC1}$	-	0.6	2	mA
Standby (SD) <sup>(1)</sup> supply current	SD = high, $T_{amb} = -25\text{ }^{\circ}\text{C to }+85\text{ }^{\circ}\text{C}$ , independent of ambient light	$I_{SD}$	-	0.01	1	$\mu\text{A}$
RXD to $V_{CC1}$ impedance	SD = high	$R_{RXD}$	400	500	600	$\text{k}\Omega$
Input voltage low (TXD, SD)		$V_{ILo}$	-0.3	-	0.4	V
Input voltage high (SD)	For compliance with $I_{SD}$ spec.	$V_{IHHi}$	$V_{CC1} - 0.3$	-	6	V
Input voltage high (TXD)		$V_{IHHi}$	$V_{CC1} - 0.5$	-	6	V
Input leakage current low	$V_{ILo} \leq 0.3\text{ V}$	$I_{ILo}$	-	0.01	10	$\mu\text{A}$
Input leakage current high	$V_{IHHi} \geq V_{CC1} - 0.3\text{ V}$	$I_{IHHi}$	-	0.01	10	$\mu\text{A}$
Input capacitance (TXD, SD)		$C_{IN}$	-	-	5	pF
Output voltage low, RXD	$C_{load} = 8\text{ pF}$ , $I_{OLo} \leq  +500\text{ }\mu\text{A} $	$V_{OLo}$	-	-	0.4	V
Output voltage high, RXD	$I_{OH} = -200\text{ }\mu\text{A}$	$V_{OHHi}$	$0.8 \times V_{CC1}$	-	$V_{CC1}$	V

**Notes**

- Typical values are for design aid only, not guaranteed nor subject to production testing
- (1) SD mode becomes active when SD is set high for more than 0.2  $\mu\text{s}$ . In SD mode the detector is disabled and the output disconnected

<b>OPTOELECTRONIC CHARACTERISTICS</b> ( $T_{amb} = 25\text{ }^{\circ}\text{C}$ , $V_{CC1} = V_{CC2} = 2.4\text{ V to }5.5\text{ V}$ unless otherwise noted)

Optical output pulse duration	Input pulse width $1.6 < t_{TXD} < 23\text{ }\mu\text{s}$	$t_{opt}$	$t_{TXD} - 0.15$	-	$t_{TXD} + 0.15$	$\mu\text{s}$
	Input pulse width $t_{TXD} \geq 23\text{ }\mu\text{s}$	$t_{opt}$	23	50	100	$\mu\text{s}$
Optical overshoot			-	-	25	%

**Notes**

- Typical values are for design aid only, not guaranteed nor subject to production testing
- (1) Equivalent to IrDA background light and electromagnetic field test: fluorescent lighting immunity
- (2) IrDA sensitivity definition: minimum irradiance  $E_e$  in angular range, power per unit area. The receiver must meet the BER specification while the source is operating at the minimum intensity in angular range into the minimum half-angular range at the maximum link length
- (3) Maximum irradiance  $E_e$  in angular range, power per unit area. The optical delivered to the detector by a source operating at the maximum intensity in angular range at minimum link length must not cause receiver overdrive distortion and possible related link errors. If placed at the active output interface reference plane of the transmitter, the receiver must meet its bit error ratio (BER). For more definitions see the document "Symbols and Terminology" on the Vishay website
- (4) Using an external current limiting resistor is allowed and recommended to reduce IRED intensity and operating current when current reduction is intended to operate at the IrDA low power conditions. E.g. for  $V_{CC2} = 3.3\text{ V}$  a current limiting resistor of  $R_S = 56\text{ }\Omega$  will allow a power minimized operation at IrDA low power conditions
- (5) Due to this wavelength restriction compared to the IrDA spec of 850 nm to 900 nm the transmitter is able to operate as source for the standard remote control applications with codes as e.g. Philips RC5/RC6<sup>®</sup> or RECS 80

**RECOMMENDED SOLDER PROFILES**
**Solder Profile for Sn/Pb Soldering**

Fig. 1 - Recommended Solder Profile for Sn/Pb Soldering

**Lead (Pb)-Free, Recommended Solder Profile**

The TFBS4711 is a lead (Pb)-free transceiver and qualified for lead (Pb)-free processing. For lead (Pb)-free solder paste like  $\text{Sn}_{(3.0 - 4.0)}\text{Ag}_{(0.5 - 0.9)}\text{Cu}$ , there are two standard reflow profiles: Ramp-Soak-Spike (RSS) and Ramp-To-Spike (RTS). The Ramp-Soak-Spike profile was developed

primarily for reflow ovens heated by infrared radiation. With widespread use of forced convection reflow ovens the Ramp-To-Spike profile is used increasingly. Shown in figure 2 is Vishay's recommended profiles for use with the TFBS4711 transceivers. For more details please refer to the application note "SMD Assembly Instructions".

**Wave Soldering**

For TFDUxxxx, TFBSxxxx, and TFBRxxxx transceiver devices wave soldering is not recommended.

**Manual Soldering**

Manual soldering is the standard method for lab use. However, for a production process it cannot be recommended because the risk of damage is highly dependent on the experience of the operator. Nevertheless, we added a chapter to the above mentioned application note, describing manual soldering and desoldering.

**Storage**

The storage and drying processes for all Vishay transceivers (TFDUxxxx, TFBSxxxx, and TFBRxxxx) are equivalent to MSL4.

The data for the drying procedure is given on labels on the packing and also in the application note “Taping, Labeling, Storage and Packing”.

Fig. 2 - Solder Profile, RSS Recommendation

**RECOMMENDED CIRCUIT DIAGRAM**

Operated with a clean low impedance power supply the TFBS4711 needs no additional external components. However, depending on the entire system design and board layout, additional components may be required (see figure 1).

Fig. 3 - Recommended Application Circuit

**Note**

<sup>1)</sup> R1 is optional when reduced intensity is used

The capacitor C1 is buffering the supply voltage and eliminates the inductance of the power supply line. This one should be a Tantalum or other fast capacitor to guarantee the fast rise time of the IRED current. The resistor R1 is the current limiting resistor, which may be used to reduce the operating current to levels below the specified controlled values for saving battery power.

Vishay’s transceivers integrate a sensitive receiver and a built-in power driver. The combination of both needs a careful circuit board layout. The use of thin, long, resistive and inductive wiring should be avoided. The shutdown input must be grounded for normal operation, also when the shutdown function is not used.

**TABLE 1 - RECOMMENDED APPLICATION CIRCUIT COMPONENTS**

COMPONENT	RECOMMENDED VALUE	VISHAY PART NUMBER
C1	4.7 μF, 16 V	293D 475X9 016B
C2	0.1 μF, ceramic	VJ 1206 Y 104 J XXMT
R1	Depends on current to be adjusted	
R2	47 Ω, 0.125 W	CRCW-1206-47R0-F-RT1

The inputs (TXD, SD) and the output RXD should be directly connected (DC - coupled) to the I/O circuit. The capacitor C2 combined with the resistor R2 is the low pass filter for smoothing the supply voltage. R2, C1 and C2 are optional and dependent on the quality of the supply voltages V<sub>CC1</sub> and injected noise. An unstable power supply with dropping voltage during transmission may reduce the sensitivity (and transmission range) of the transceiver.

The placement of these parts is critical. It is strongly recommended to position C2 as close as possible to the transceiver pins.

When extended wiring is used as in bench tests the inductance of the power supply can cause dynamically a voltage drop at V<sub>CC2</sub>. Often some power supplies are not able to follow the fast current rise time. In that case another 4.7 μF (type, see table under C1) at V<sub>CC2</sub> will be helpful.

Under extreme EMI conditions as placing an RF-transmitter antenna on top of the transceiver, we recommend to protect all inputs by a low-pass filter, as a minimum a 12 pF capacitor, especially at the RXD port. The transceiver itself withstands EMI at GSM frequencies above 500 V/m. When interference is observed, the wiring to the inputs picks it up. It is verified by DPI measurements that as long as the interfering RF - voltage is below the logic threshold levels of the inputs and equivalent levels at the outputs no interferences are expected.

One should keep in mind that basic RF - design rules for circuits design should be taken into account. Especially longer signal lines should not be used without termination. See e.g. “The Art of Electronics” Paul Horowitz, Winfield Hill, 1989, Cambridge University Press, ISBN: 0521370957.

Fig. 4 - Typical Application Circuit

Figure 4 shows an example of a typical application for to work with a separate supply voltage  $V_S$  and using the transceiver with the IRED anode connected to the unregulated battery  $V_{batt}$ . This method reduces the peak load of the regulated power supply and saves therefore costs. Alternatively all supplies can also be tied to only one voltage source. R1 and C1 are not used in this case and are depending on the circuit design in most cases not necessary.

### I/O AND SOFTWARE

In the description, already different I/Os are mentioned. Different combinations are tested and the function verified with the special drivers available from the I/O suppliers. In special cases refer to the I/O manual, the Vishay application notes, or contact directly Vishay Sales, Marketing or Application.

For operating at RS232 ports the ENDECS TIR1000 or MCP2122 is recommended.

#### Note

- TFBS4711 echoes the TXD signal at the RXD output during transmission. For communication this signal is to be correctly ignored by the controller or the software. The echo signal is implemented for test purposes in mass production

TABLE 2 - TRUTH TABLE					
INPUTS			OUTPUTS		REMARK
SD	TXD	OPTICAL INPUT IRRADIANCE mW/m <sup>2</sup>	RXD	TRANSMITTER	OPERATION
High > 1 ms	x	x	Weakly pulled (500 kΩ) to V <sub>CC1</sub>	0	Shutdown
Low	High	x	Low (active)	I <sub>e</sub>	Transmitting
Low	High > 100 μs	x	High inactive	0	Protection is active
Low	Low	< 4	High inactive	0	Ignoring low signals below the IrDA defined threshold for noise immunity
Low	Low	> min. detection threshold irradiance < max. detection threshold irradiance	Low (active)	0	Response to an IrDA compliant optical input signal
Low	Low	> min. detection threshold irradiance	Undefined	0	Overload conditions can cause unexpected outputs
